# TWO-FACTOR AUTHENTICATION

Access control is the foundation of security, and we're making it even stronger.

Use **your standard authentication app** to enable two-factor authentication for the Central Management of NovaBACKUP Managed Backup.

## Account Management

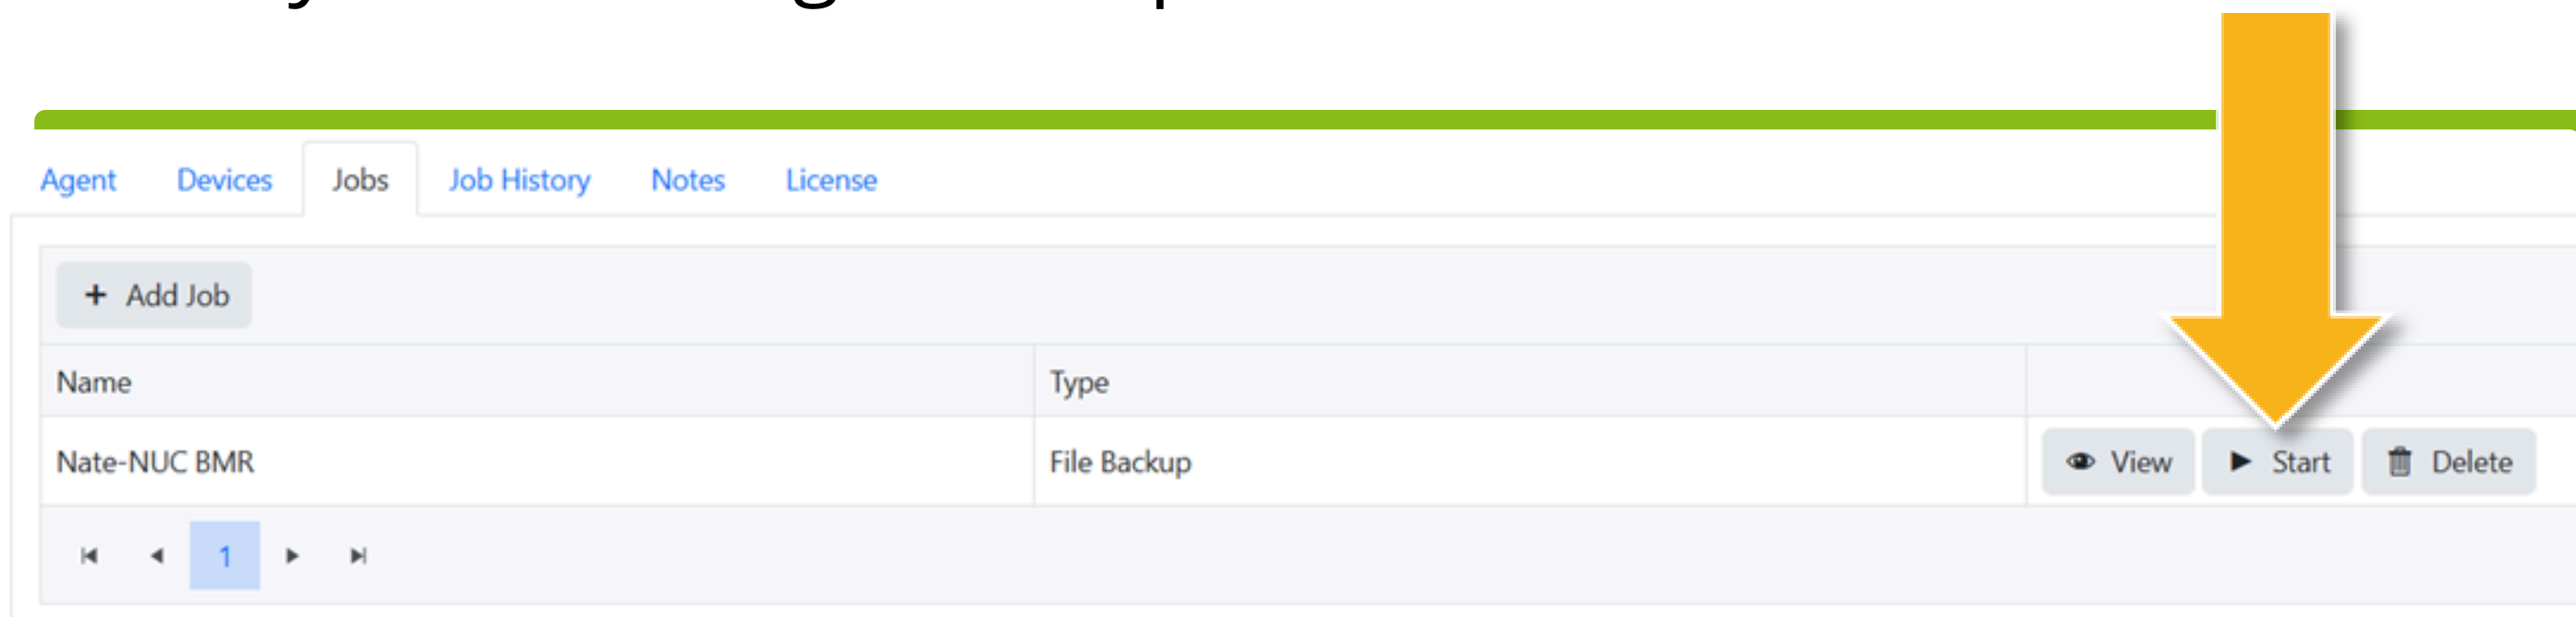

Change your account settings

Password	<a href="#">[ Change your password ]</a>
Date and Time	<a href="#">[ Change time zone ]</a>
Date, Time, and Numeric Format	<a href="#">[ Change date, time, and numeric format ]</a>
Email Confirmation Status	<b>Confirmed</b>
Confirm Email Address	Confirm Email Address
Two Factor Authentication Enabled	<b>Enabled</b>
Enable two-factor authentication	Enable Two-Factor Authentication

# START BACKUP OPTION

## Start Backup Jobs Immediately

Start backup jobs at any time from the Central Management to add manual, out-of-schedule backups and test your backup jobs immediately after setting them up.

# **FURTHER** ENHANCEMENTS

Behind the scenes  
improvements.

# FURTHER ENHANCEMENTS

- **Updates for Windows Server 2025:** To account for the changes Microsoft implemented regarding user access control.
- **Restore view update:** To prevent restore failures due to outdated files, only backups available within the retention settings are now displayed.
- **Foundation work for new Disaster Recovery:** Big changes are coming and we are preparing the backend for the update.

## Preparing for and Recovering from a Data Breach: A Technical Guide for SMBs

by Josefine.Fouarge on Jul 7, 2025 8:30:00 AM

As an SMB, you might be wondering why you should care about data breaches, ransomware, and other cybersecurity issues. After all, SMBs are too small to be of interest to cybercriminals, right?

Unfortunately, that's not true, and this misconception can be costly.

SMBs face growing cybersecurity threats with increasingly severe consequences. Cybercriminals no longer only target large enterprises. In fact, the majority of data breaches now affect SMBs.

SMBs are now being targeted nearly 4x more often than large organizations.

## What's New

### Security and Convenience

This quarter's release is all about giving you more control and stronger security when managing your backups. Whether you're a managed service provider (MSP) serving regulated industries or an in-house IT professional responsible for daily backups, these updates are designed to simplify your work and make your backups (and with that restores) more reliable.

Highlight

### Enable 2FA

Backup systems are prime targets for cybercriminals. A compromised admin account can grant access to all client backups and sensitive
